Technical Skills Overview

Programming & Tools

Education

PhD., Information Communication Technology Specialization: Communication Systems School of EECS KTH Royal Institute of Technology 2017 - 2023 | Stockholm, Sweden

MSc., Electrical Engineering

Specialization: Digital Electronic Circuits Amirkabir University of Technology 2015 - 2017 | Tehran, Iran

BSc., Electrical Engineering

Specialization: Electronics Sharif University of Technology 2010 - 2015 | Tehran, Iran

Research Summary

I have improved the performance of the Network Functions Virtualization (NFV) service chains running at 100/200-Gbps commodity hardware by using **multi-disciplinary low-level optimization** techniques. I have been actively doing (networked) system programming in C/C++ and running automated experiments on the UNIX environment (e.g., Linux), using bash & Python scripts. My research has resulted in:

- Google PhD fellowship 2021 award in systems and networking, which recognizes outstanding graduate students doing exceptional and innovative research in areas relevant to computer science.
- Top systems conference papers (EuroSys'19, ATC'20, ASPLOS'21, NSDI'22, and CoNEXT'24).
- 20 patent applications filed in collaboration with Ericsson research (see here).
- News articles at Ericsson Blog (about memory management, packet processing, and packet reordering), KTH news (about CPU cache and traffic order), Tech Xplore, and Framtidens Forskning.
- · Community award at NSDI'22 for "Packet Order Matters".
- Open-source contributions (CacheDirector, DDIO-Bench, PacketMill, DDC-RA, and IOMMU-Bench).

Watch this wideo and read my full CV & dissertation for more information.

Experience

Jan 2024 - **Distributed Systems Researcher at Networking SW Arch.** NVIDIA Stockholm, Sweden

Aug 2023 - Senior Researcher at Connected Intelligence Unit
Jan 2024 Stockholm, Sweden

- Improving packet processing at multi-100-Gbps rates (FAJITA).
- Using large language models (LLMs) to build and configure networked systems (see NetBuddy, FlowMage, and NetConfEval).

RISE

• Developing pruning techniques and improving inference of LLMs.

Aug 2017 - **Postdoctoral and Doctoral Researcher**Aug 2023 Stockholm, Sweden

Advisors: Professor Dejan Kostić & Professor Gerald Q. Maguire Jr.

- Proposed a slice-aware memory management technique to exploit the non-uniform cache architecture (NUCA) in Intel processors and implemented CacheDirector to send packets to the right slice of the Last-Level Cache (LLC).
- Implemented a set of benchmarks (DDIO-Bench) to study the effectiveness of Data Direct I/O Technology (DDIO) at 100 Gbps.
- Implemented PacketMill to grind the whole packet processing stack and produce a customized binary for a given network function.
- Analyzed a KTH campus trace (via Spark & Pandas) to extract flowrelated characteristics & predict packet interarrival time with LSTM (via Keras/TensorFlow) to reorder packets using Reframer.
- Implemented a set of benchmarks (IOMMU-Bench) to study the impact of IOTLB misses on throughput and extended Page Pool API & mlx5 Linux driver to use 2-MiB hugepages for packet buffers to mitigate the IOTLB wall.
- Designed & Implemented a constraint-based C++ framework (DDC-RA) to allocate resources in a disaggregated data center.

<u>Tools</u>: DPDK, FastClick, Linux kernel, iPerf, Perf, LLVM, Intel PCM, Intel PMU Profiling Tools, Cache Allocation Technology (CAT), Spark, Pandas, Tensorflow, Gecode.

<u>Hardware</u>: Intel Xeon & AMD EPYC processors, NVIDIA/Mellanox & Intel NICs.
